Brackets «Made in Japan» by TOMY Inc.

GC Orthodontics was created from an alliance of two Toothal industry leaders: GC Corporation and TOMY Inc. Based in Japan, TOMY Inc. supplies all of our brackets, bands and force-intuitive archwires. This partnership guarantees to our clients a consistent level of quality among the highest in the orthodontic industry. The latest innovations in technology are used to create our products such as CIM (Ceramic Injection Molded) and CNC (Computer Numerical Controlled) in order to provide the most precise and robust products available.

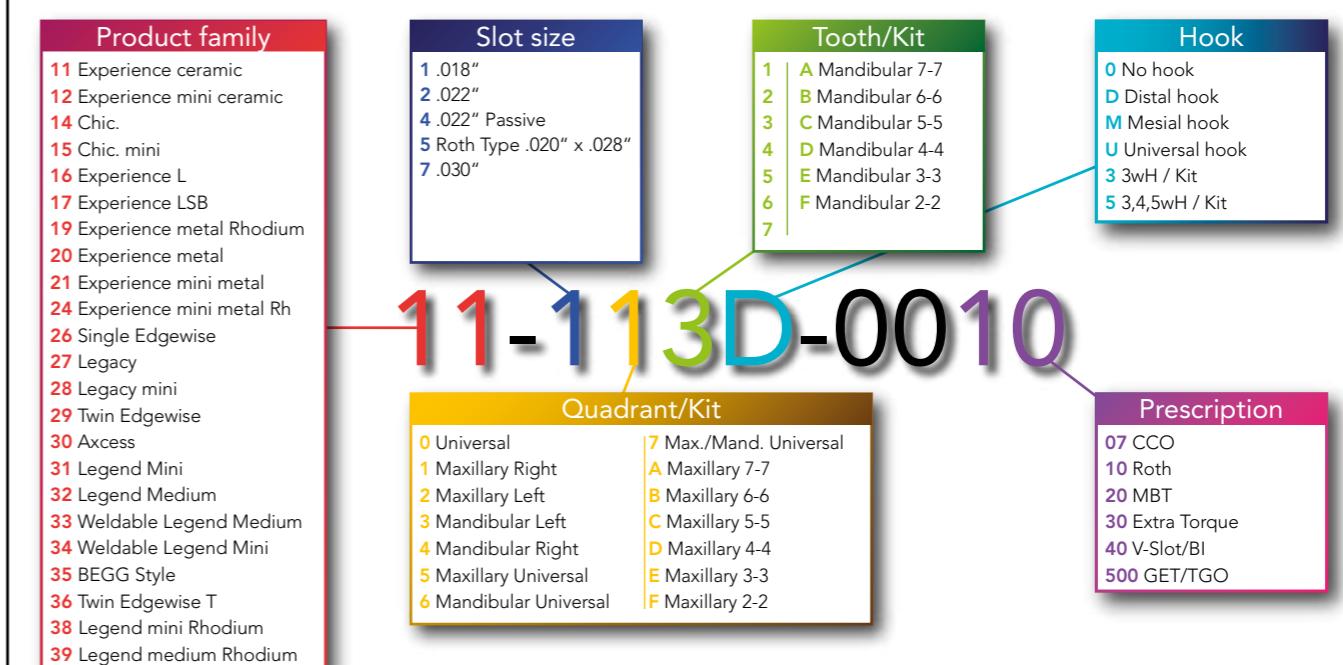

Automated assembly of brackets TOMY factory (Japan)

Assembly of personalized kits Breckerfeld (Germany)

EXPERIENCE™

EXPERIENCE™ Interactive System

Self-Ligating Brackets

EXPERIENCE is a comprehensive interactive self-ligating system, featuring a low friction/control combination that translates into increase patient comfort, less chair time and additional precision in your treatment outcome. EXPERIENCE system surpasses your treatment demands, without compromise, and usually with no auxiliaries. Whether you use small dimension or full sized arches at the end of treatment, the EXPERIENCE interactive system offers the prescription that best fits your needs and those of your patients.

Passive

Interactive

Active

EXPERIENCE ceramic

Discreet when in the mouth, with excellent bond strength and mechanical properties, EXPERIENCE ceramic has become the reference in aesthetic appliances. Its Rhodium clip literally blends into the bracket's ceramic body. First order information is compatible with EXPERIENCE metal brackets allowing for the appliance to remain consistent when both brackets are present on the same arch

Rh Rhodium

EXPERIENCE metal and Rhodium

Interactive brackets are the best selling self-ligating system in the world. Reduced friction and control are the 2 most sought-after features in an orthodontic appliance. In addition to these, EXPERIENCE metal also provides: information precision chosen by the practitioner, and a perfectly adapted anatomical shaped micro-etched base, which limits debonding. Its rhodium finish creates an enhanced aesthetic that in combination with EXPERIENCE ceramic provides a perfect mixed treatment.

EXPERIENCE mini ceramic

Created with the same high-quality standards as EXPERIENCE ceramic, these brackets offer a low profile while preserving structural resistance. EXPERIENCE mini ceramic provides enhanced patient comfort and discretion.

EXPERIENCE mini metal and Rhodium

Rh Rhodium

Launched in 2013, this bracket was an instant success. Featuring the same manufacturing quality as EXPERIENCE metal, its low profile increases comfort and the rhodium version is ideal for mixed treatments.

EXPERIENCE L

EXPERIENCE L is one of the most sophisticated interactive lingual brackets available on the market. Its easy-to-access golden clip makes wire changes extremely accessible for clinicians, aiding to reduce treatment time and thus increasing patient satisfaction. Its small size limits speech interference and potential bond failure.

EXPERIENCE LSB

Is a self-ligating lingual bracket similar to EXPERIENCE L, but with a smaller base. It is the tool of choice for aesthetic corrections for anterior alignment.

Invisible, EXPERIENCE LSB is the perfect treatment option for discerning adult patients looking for an efficient cosmetic solution. Easy-to-bond through direct bonding on the lingual surface or indirectly via transfer trays.

GET Prescription

GET Prescription EXPERIENCE™

Developed with Dr. Stefano Troiani, based on Professeur Michel Legall's TGO technique, this prescription features slot sizes of .020" x .028" on the incisors to promote torque control at the end of treatment.

Who is Dr. Stefano Troiani?

Dr. Stefano Troiani graduated from the orthodontic program at the University of Aarhus in Denmark receiving his MSc in Orthodontics in 2003. Private practice in Denmark and Germany between, 2003 and 2018.

- Clinical Assistant Professor at the Department of Orthodontics of the University of Aarhus, 2005-2007
- Scientific Director for the Alpe Adria Face master program at the University of Graz, Ljubljana and Zagreb, 2012-13.
- Consultant Orthodontist at the Department of Maxillo-Facial Surgery at Sønderborg Hospital, 2008- 2009 2009
- Department of Maxillo-Facial Surgery at Odense University Hospital in Denmark, 2008-2018
- Currently Dr. Troiani is in private practice in Switzerland and has given 130 lectures internationally.

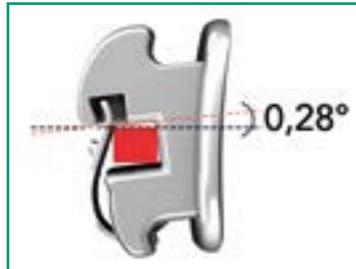

«Orthodontic treatment should be tailored to the specific needs of each patient that is based on a thorough diagnosis using a proper treatment plan and realistic biomechanics. At the same time, I firmly believe that being a good orthodontist does not mean producing one or two Board Certified cases per year. It is about providing all patients with a continuous high level of care. Hence the GET treatment is meant to provide the orthodontist with a general framework which can be adapted to the needs of individual patients. I wish you all the best and success.»

Upper

U1, U2: .020" x .028" slot - U1: 12°T, 5°A / U2: 8°T, 9°A

The problem with upper incisors is normally a lack of torque at the end of the treatment. This is due to play between the archwire and the slot. In some prescriptions, extra-torque series of brackets are available. We prefer to decrease the size of the slot and maintain normal torque values. This has two benefits:

- Allows more predictable expression of torque values
- Reduces the need of additional inventory for the orthodontist

Torque play in GET brackets based on wire and bracket slot sizes (.020" x .028" vs. .022" x .028").

Measurement made at Tomy (Japan) R&D laboratory.

Tomy's comment:

We would like to report the minimum and maximum theoretical play calculated from the dimensions obtained from the actual manufacturing records (product inspection records) of brackets and wires as follows. As for the radius of curvature of wire, it is normally about 0.05mm in our wires, but competitors' wires may have larger radius, so we also calculated the play when it is 0.1mm as a reference.

Bracket	Wire	Wire material	.020" x .028" slot		.022" x .028" slot	
			MIN	MAX	MIN	MAX
EXPERIENCE metal & mini metal	0.019" x 0.025"	SS Rh	2.94°	5.90°	8.26°	11.73°
	0.019" x 0.025"	NiTi	2.55°	5.22°	7.93°	11.00°
	0.020" x 0.020"	NiTi	0.28°	3.72°	7.40°	11.80°
EXPERIENCE C	0.019" x 0.025"	SS Rh	3.70°	6.71°	9.35°	12.89°
	0.019" x 0.025"	NiTi	3.30°	6.03°	8.99°	12.15°
	0.020" x 0.020"	NiTi	1.26°	4.81°	8.86°	13.52°

U3: .022" x .028" slot - U3: 0°T, 11°A

We chose the original straight wire 11 degrees mesial tip, to allow an increase in arch length in the upper arch and 0 degrees torque to avoid too steep a canine guidance, which can lead to an increase in immediate Bennett movement.

U4, U5: .022" x .028" slot - U4/5: -10°T, 4°A, 2°OF

We chose to add very little extra lingual crown torque (-10 degrees). We do not want to have upper bicuspids with a marked lingual inclination (an «open» position is better from a gnathological standpoint) but a 3 degrees extra negative torque is needed to compensate for side-effects of levelling, which tends to flare out premolars.

U6, U7: .022" x .028" slot - U6: -20°T, 10°OF / U7: -25°T, 6°OF

We reduced the value of the distal rotation to the original straight wire value (U6) and even less(U7). This is to avoid a lingually projection of the distal-buccal cusp of the upper second molar, which is a major source of premature contacts. We also chose to increase the lingual crown torque in order to reduce the tendency to premature contacts due to hanging palatal cusps of upper molars (especially second molars).

Visit the website

Lower

L1, L2: .020" x .028" slot - L1 / L2: -1°T, 2°A

We maintained classical values of torque, but the .020»x.028» slot allows an optimal control. Moreover, the low profile of EXPERIENCE mini brackets helps to solve a very common problem of self-ligating brackets, which tend to give a premature contact with the palatal faces of the upper incisors, in some cases hindering the completion of the overjet reduction.

L3: .022" x .028" slot - L3: -3°T, 3°A

A reduced value of mesial tip, to reduce the lower arch's length. At the same time, we chose a reduced value of lingual crown torque, to avoid excessive transverse overjet and to harmonise with the decreased lingual crown torque on the upper cuspids.

L4, 5, 6, 7: .022" x .028" slot

L4 : -17°T, 1°A, 4°OF

L5 : -22°T, 1°A, 4°OF

L6: / L7 : -30°T, -1°A, 4°OF

The Rh Rhodium range

When metal meets Aesthetics

Largely used in the jewelry industry, Rhodium has the unique characteristic of reducing reflection (shine). Its silver matte finish provides a transparent appearance that enhances aesthetics.

Brackets

Self-ligating or conventional, there will be the bracket type for you!

EXPERIENCE mini metal Rhodium

This self-ligating bracket has been widely used for years. It incorporates the main quality manufacturing characteristics known from TOMY Inc. The bracket features a CNC milled bracket slot for more precision in .018» or .022», torque in the base, an interactive clip for ideal torque expression and a micro-etched mesh base to limit potential debonding.

EXPERIENCE metal Rhodium

The low profile EXPERIENCE mini metal Rhodium is also manufactured by TOMY Inc. The bracket features a CNC milled slot for increased precision in .018» or .022», torque in the base, an interactive clip for ideal torque expression and a micro-etched mesh base to limit potential debonding.

LEGEND mini and medium Rhodium

These conventional brackets have proven their effectiveness. Made in Japan and manufactured with the high-quality standards you'd expect from TOMY Inc. LEGEND's bracket slot is CNC milled for increased precision in .018» or .022». The bracket features large undercuts for easy ligation and torque in the base with micro-etching to limit potential debonding.

Rhodium Archwires

Our Rhodium-treated line of archwires ensures a complete aesthetic effect. Regardless of the treatment stage, we have an archwire that meets your patient's needs. Archwires for the beginning of treatment such as INITIALLOY™ Rhodium shape memory archwires or BIO-ACTIVE™ Light progressive force archwires, in addition to BIO-ACTIVE™ or stainless steel archwires. Our wide range of archwires allows you to offer patients a global treatment without compromising on biomechanics.

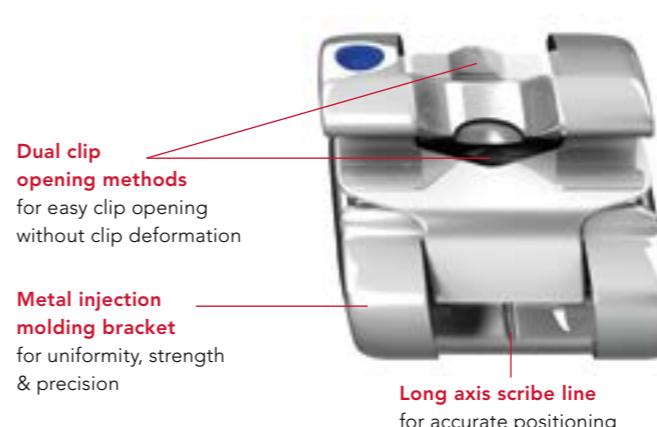

EXPERIENCE metal

EXPERIENCE metal

SL Product

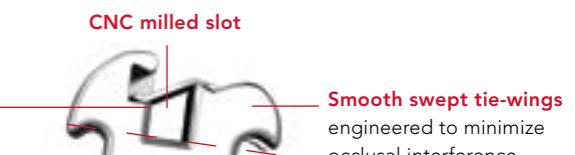

The EXPERIENCE collection of self-ligating orthodontic brackets offer doctors and patients a variety of options for their orthodontic treatment needs. EXPERIENCE brackets minimize friction during initial leveling and aligning and allow for increased torque and rotation control during finishing. Packed by 10.

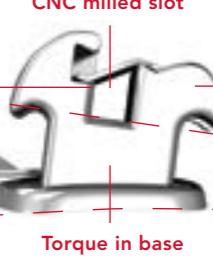

Dual clip opening methods
for easy clip opening without clip deformation

Metal injection molding bracket
for uniformity, strength & precision

Long axis scribe line
for accurate positioning

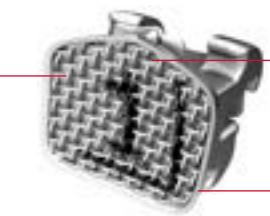

Triple chamfered slot
for easy wire engagement and to eliminate arch wire binding & notching

Smooth swept tie-wings
engineered to minimize occlusal interference

Base ID
Laser marking ID

Compound contoured
pad ensures an anatomically correct fit for each tooth

80 gauge, micro-etched mesh
for maximum bond strength

Self Ligation Features

- Increased patient comfort
- Reduced chair time
- Fewer office visits necessary
- Shortened treatment time
- Improved patient hygiene
- Pleasing aesthetics

EXPERIENCE metal, Extra Torque

This prescription is based on the use of less than full size archwires due to increased torque on the maxillary incisors. Increased buccal root torque in the upper bicuspids prevents any lingual cusp interference.

EXPERIENCE metal

EXPERIENCE™ metal Rhodium

Today, EXPERIENCE metal Rhodium Coated joins the ever-growing product line of aesthetically treated brackets. The bracket is treated with a rhodium coating that in no way alters its characteristics.

EXPERIENCE mini metal EXPERIENCE™ mini metal

SL Product

The EXPERIENCE mini collection is a smaller version of the original EXPERIENCE metal bracket. By eliminating the vertical channel that the EXPERIENCE metal's clip travels through, an extremely low profile is achieved. Patients can now experience self-ligation with additional low profile benefits, including: reduced bracket size, increased patient comfort and enhanced aesthetics. The EXPERIENCE mini minimizes friction during initial leveling and aligning, while allowing for increased torque and rotation control during finishing. After the metal or ceramic injection process (MIM or CIM), the mold retracts during a cooling down phase. TOMY then incorporates an extra step to make the archwire slot consistently precise by milling the slot of each EXPERIENCE bracket by using Computer Numerical Controlled (CNC) to ensure that the slot measures exactly .018" or .022". All TOMY archwire slots express the exact torque and angulation built into each bracket providing a more predictable result.

Self Ligation Features

- Low-profile
- Reduced size
- Increased patient comfort
- Enhanced aesthetics

Advantage Rhodium

The matte finish and reduced bracket size allows for a more discrete metal bracket.

The EXPERIENCE collection is manufactured by TOMY Inc., a leading manufacturer of self-ligating brackets since the year 2000. Brackets in the collection are available in both standard and mini size, in metal, rhodium and ceramic material, and in a variety of prescription options.

EXPERIENCE™ mini metal Rhodium

This EXPERIENCE mini bracket is rhodium-coated creating a completely matte finish which diffuses light and reduces reflection. The matte finish and reduced bracket size allows for a more discrete metal bracket. Orthodontists can propose aesthetic treatments without compromising with performance.

EXPERIENCE ceramic EXPERIENCE™ ceramic

SL Product **HI** Aesthetic

This ceramic self-ligating twin bracket delivers outstanding aesthetics and performance. The bracket features a Rhodium clip that blends into the ceramic body of the bracket creating a beautiful appearance. The base is a 100% mechanical lock ensuring both reliable bond strength and easy debonding. Packed by 5

Pair EXPERIENCE ceramic with our Initalloy , Bio-Active, and Bio-Edge thermal NiTi arch wires, for increased patient comfort and treatment efficiency. Rhodium-coated arch wires also available for a completely discrete orthodontic bracket system (Refer to archwires section).

Bracket & Wire Combination

Pair EXPERIENCE ceramic with our Initalloy , BIO-ACTIVE, and BIO-EDGE thermal NiTi arch wires, for increased patient comfort and treatment efficiency. Rhodium-coated arch wires also available for a completely discrete orthodontic bracket system.

Instruments

To open EXPERIENCE ceramic brackets:

50-1030-0000

C-Tool: Features both a double forked end to facilitate wire insertion and an end with a hollow ball to safely open the bracket from the gingival side.

50-0030-0000

Open Tool: Is a doubleended instrument that features a hollow ball, which aides in opening EXPERIENCE brackets from either the buccal (hook) or gingival (safety) side.

EXPERIENCE ceramic Extra Torque

This prescription is based on the use of less than full size archwires due to increased torque on the maxillary incisors. Increased buccal root torque in the upper bicuspids prevents any lingual cusp interference.

EXPERIENCE ceramic

EXPERIENCE™ mini ceramic

SL Product **HI** Aesthetic

This ceramic self-ligating twin bracket delivers outstanding aesthetics and performance. The bracket features a rhodium coated clip that blends into the ceramic body of the bracket creating a beautiful appearance. The base is a 100% mechanical lock ensuring both reliable bond strength and easy debonding.

Pair EXPERIENCE with our Initalloy, Bio-Active, and Bio-Edge thermal NiTi arch wires, for increased patient comfort and treatment efficiencies. Rhodium arch wires also available for a completely discrete orthodontic bracket system.

EXPERIENCE L

EXPERIENCE L™

EXPERIENCE L is one of the most sophisticated interactive lingual brackets available on the market. Its easy-to-access golden clip makes wire changes extremely accessible for practitioners, aiding to reduce treatment times and thus increasing patient satisfaction. Its small size limits speech interference and potential bonding failure. Packed by 5.

EXPERIENCE LSB

EXPERIENCE LSB (Small Base)

SL Product **HI** Aesthetic

EXPERIENCE LSB is a self-ligating lingual bracket similar to EXPERIENCE L, but with a smaller base. It is the tool of choice for aesthetic corrections for anterior alignment. Invisible, EXPERIENCE LSB is the perfect treatment option for discerning adult patients looking for an efficient cosmetic solution. Easy- to-bond through direct bonding on the lingual surface or indirectly via transfer trays. Packed by 5.

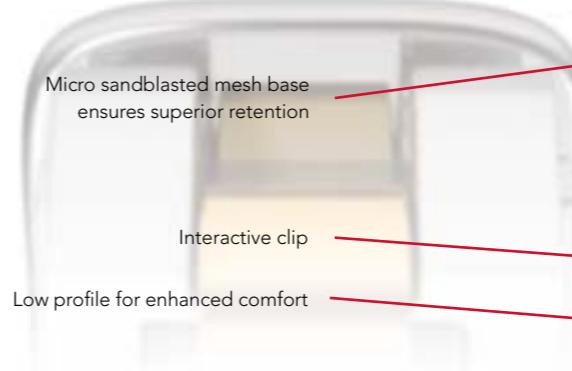

Rounded and polished tie-wings reduce occlusal interferences

Golden spring clip enhances visibility. Full slot coverage and two point contact

Lower incisor with narrow base
U: 17-153U-0010
L: 17-163U-0010

Micro sandblasted mesh base ensures superior retention

Chíc.

Chic. mini and Chic.

Chic is the answer for doctors who want an impressive ceramic bracket option for their patients without compromising the performance or strength of the bracket. Chic is manufactured by Ceramic Injection Molding (CIM) creating uniformity, strength, and a true mechanical base. Its translucency complements the patient's tooth shade while offering optimum stain resistance.

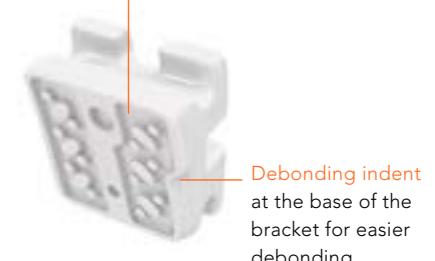

Rhomboid bracket
for easy bracket placement

Triple chamfered slot
for easy wire engagement
and to eliminate arch wire
binding & notching

Ceramic Injection Molding
for uniformity, strength
& precision

Molded mechanical base
for greater bracket retention and
predictable debonding

Bracket combinations

You can combine Chic Ceramic brackets with LEGEND™ Rhodium brackets for a complete aesthetic result.

LEGEND

LEGEND mini / LEGEND medium

The LEGEND collection is a traditional twin, metal bracket system available in a medium and mini size. LEGEND medium is manufactured by a Metal Injection Molding (MIM) and Computer Numerical Controlled (CNC) precision milling process for a consistent and precise bracket that features a 100% accurate slot and anatomically correct bonding pads for maximum bond retention.

Bracket combinations

You can combine LEGEND™ mini/medium brackets with Chic Ceramic brackets for a complete aesthetic result.

The LEGEND collection is manufactured by TOMY Inc. in Yumoto, Japan. Orthodontists around the world have used and adored TOMY brackets since their first bracket system launched in December of 1961. As of today, TOMY has grown to be one of the most respected bracket manufacturers in the world. LEGEND is available in a standard and mini size, in metal and rhodium coated and in a variety of prescriptions.

LEGEND

Aesthetic LEGEND mini / LEGEND medium

Rh Rhodium

LEGEND™ mini Rhodium features the same characteristics as the standard bracket but with enhanced aesthetics. LEGEND™ mini is manufactured by metal injection (MIM) and its slot undergoes a CNC (Computer Numerical Controlled) process guaranteeing an exact slot size of .018" x .018" or .022" so that the bracket information is precisely expressed. Its anatomical mesh base ensures maximum bracket retention on the tooth.

AXCESS

AXCESS, also manufactured by Tomy® in Japan, is an affordable bracket created from MIM (Metal Injection Molded) technology. All information (3 dimensions) is built into the bracket. Torque in base system. A laser-milled anatomical base guarantees retention as reliable as found in traditional meshes.

Disto-gingival color ID

Wide undercuts facilitate ligation

Torque in base

Legacy & Legacy Mini

Based on Dr. Roth's philosophy, this bracket is the most successful programmed straight wire bracket. In addition to in/out (1st dimension), torque, tip and overcrowding are programmed into the cuspid and bicuspids brackets to correct the effects of parasitic rotations due to positioning mechanics.
